APPENDIX C: PEDESTRIAN PLAN MASTER PROJECT LIST

BELLINGHAM PEDESTRIAN MASTER PLAN

This Appendix first summarizes the methodology used for prioritizing pedestrian infrastructure projects identified in the Pedestrian Master Plan, followed by a comprehensive project list organized based on the results of the prioritization exercise.

Project Prioritization Summary

The Bellingham Pedestrian Master Plan focuses implementation efforts where they will provide the greatest community benefit. While all projects represent important steps for improving the pedestrian environment in Bellingham, limited financial resources require a prioritization mechanism. The Project Team (City of Bellingham staff and Alta Planning + Design) evaluated all the projects developed from the needs analysis.

Evaluation Criteria

The Pedestrian Master Plan Steering Committee developed evaluation criteria for pedestrian projects that are connected to the plan's vision and goals. The purpose of this prioritization exercise was to understand the relative priority of the projects so that the City may apportion available funding to the highest priority projects. Long-term projects are also important, and may be implemented at any point in time as part of a development or public works project. The ranked lists should be considered a "living document" and should be annually reviewed to ensure they reflect current community priorities. Table 1 on the following page provides a basic description of the evaluation criteria with the related value that the project team and steering committee sought to capture in the priority evaluation.

Criteria Measurement

Each evaluation criterion was assigned a range of points, with the number of potential points reflecting the criterion's relative importance (based on input from the steering committee). Objective measurements of each criterion were developed as shown in Table 2.

Data Selection and Weighting

Criteria measurements were devised to include data points that would be readily available at the time of the analysis and in the future. The intent was to provide a consistent tool for evaluation that can be used over time as conditions within the city change. The criteria were also structured to provide a balance between significant priorities such as, safety, connectivity and equity. The resulting criteria ranking vary in total maximum scores to account for the desired balance. For example, housing tenure is used in the analysis to identify areas of the city where residents are more likely to have lower incomes and high need for pedestrian facilities. This criterion has a maximum score of 34 because it is the only criterion that addresses equity in the analysis. In contrast, the crash reduction posted speed and traffic volume criteria all address safety and have a maximum score of 10.

Criterion	Related Value	Description
Safety (Crash Reduction)	Safety	Score each project based on collision history. Projects receive a higher score if they improve a location that has had a high number of collisions.
Posted Speed	Safety	Score each project based on the posted motor vehicle operating speed.
Traffic Volume	Safety	Arterial roadways are grouped into categories based on the estimated daily motor vehicle traffic. Agency staff provided categorical definitions based on existing traffic counts at selected locations.
Economic Equity	Equity	Projects are scored based on their ability to serve lower income residents as determined by housing type and whether owner or renter occupied.
Safe Routes to School	Connectivity/ Health	Score projects based on their ability to serve students walking to a school.
Pedestrian Access to Community Destinations	Connectivity/ Sustainability	Score each project based on its proximity to commercial areas, parks, schools and civic areas. Projects receive a higher score if they are located closer to community destinations with potential to draw high volumes of pedestrians.
Transit Connectivity	Connectivity/ Multi-Modal Transportation	Score each project based on its proximity to WTA transit service.
Crossing (Intersection Only)	Safety/ Connectivity	Score each project based on whether it improves an arterial or local roadway crossing.
Neighborhood Plan	Community	Project identified as part of a neighborhood plan, Urban Village Plan, or other public planning process.

Table 1: Pedestrian Master Plan Project Prioritization Criteria Descriptions

Criterion	Max Points Possible	Possible Points	Measurement
		10	3 or more collisions
Safety (Crash Reduction)	10	6	2 collisions
		3	1 collision
		10	Projects on roadways with posted speeds over 40 mph
Posted Speed	10	5	Projects on roadways with posted speeds over 30 mph
		3	Projects on roadways with posted speeds under 30 mph
		10	Very High
Traffic Volume (based on		8	High
relative volumes in	10	6	Moderate
Bellingham)		4	Low
		2	Very Low
Economic Equity	34	Range from 0 to 34	Projects receive a score between 1 and 34 with the highest scores for areas with publicly subsidized rental housing, and the lowest scores for areas with owner- occupied, high-end single family housing.
Safe Routes to School	10	10	10 points for any project on the primary network within 1 mile (network distance) from the school, within the specific school's attendance area.
		0	Projects without a direct connection to a school receive 0 points.
Pedestrian Access to Community Destinations	10	Range from 0 to 10	Projects receive a score between 1 and 10 based on estimated pedestrian population density using daytime and nighttime population of residents, employees, customers, students and visitors.
		10	Projects receive 10 pts if on a roadway with a 'Go' stop
Transit Connectivity	10	5	Projects receive 5 pts if on a roadway with any other transit stop
		1	Projects receive 1 pt if within 1/8 mile of a stop.
Crossing (Intersection	3	3	Projects receive a 3 at an arterial crossing
Only)	د 	2	Projects receive a 2 at a local roadway crossing.
Naighborhood Disp	2	2	Projects that were identified in an adopted plan or established project list receive a 2.
Neighborhood Plan	2	0	Those on roadways not noted by the public will receive a 0.
