

City of Bellingham Current Construction Project

Post Point Alternative Outfall

Project Description

The project consists of the installation of a new 54-60 inch diameter pipe to replace the current 30-inch diameter secondary outfall that is in need of replacement. The new pipeline will follow an existing 30 inch secondary outfall from the plant, under three sets of BNSF railroad tracks, through Marine Park and 600 feet out into Bellingham Bay. Trail and lagoon access will be affected during construction and subsequent environmental mitigation.

Project Bid No: 23B-2007

Project Number: EU-0082

Project Schedule

- Awarded : 5/7/07
- Completion date: 10/26/07

Estimated Project Cost

- \$2,062,582.00
