

## Willow Spring at Squalicum Creek Park

### Project Overview: EN-0026

The Willow Spring project will construct valuable and much needed new salmon habitat and wetlands along the western edge of Squalicum Creek Park, connecting to Squalicum Creek. When completed, the Willow Spring project will create about 1,000 lineal feet of new stream for off-channel

salmon rearing habitat and refuge, nearly 1/3 of an acre of new wetlands, and nearly 1.5 acres of riparian (stream-side) forest. The project includes a significant amount of excavation to create the new stream and requires import of earth materials suitable for creating the stream bed and its banks.

**Status - June 2011**

**Accomplishments:** Project complete.

**Next Milestones:** Close out.
