## SUMMARY

The City of Bellingham currently owns or manages over 4,800 acres of land within the city limits and surrounding areas of Whatcom County. While most of these properties provide a valuable public benefit, some may be identified as surplus either now or in the future to the City's needs. Chapter 4.84 of the Bellingham Municipal Code allows for the City Council to declare that if it is in the public interest and not needed for some present or future municipal use, real property held by the City may be returned to the tax rolls and sold for a reasonable return.

The purpose of the Surplus Land Assessment is to provide a replicable process for evaluation of City properties to determine which properties are potentially surplus to the City's needs. Establishing a methodology which can be repeated annually saves time, reduces the cost of future assessments, and ensures a consistent and transparent process. A Geographic Information System (GIS) model is utilized to evaluate City properties against established criteria, providing an objective and repeatable, baseline process. Project team members review, verify, and supplement the results of the GIS model to identify unique situations missed by the model.

## BACKGROUND

Prior to the inaugural Surplus Land Assessment in 2017, City of Bellingham departments were individually responsible for annual review of properties under their management for potential surplus. This departmentalized method of property review was time-intensive and often repetitive in nature. It was determined to be in the City's interest to develop a replicable process that would have lasting functionality. The development of a comprehensive process for evaluating all City-owned lands would allow for efficient identification of candidate surplus properties.

At the June 20th, 2016 City Council Committee of the Whole meeting, City of Bellingham Planning staff presented the scope and specific criteria for the GIS model to identify surplus potential. City Council was supportive of the evaluation criteria presented as well as the ability of the

model to provide a centralized database and establish an effective process for identifying potential surplus properties.

## METHODOLOGY

The overall goal of the Surplus Land Assessment is to establish a repeatable process for identifying potential surplus properties and to create an accessible database to store the results of the analysis.

City of Bellingham Planning and Community Development Department staff fulfill the lead role in facilitating the Assessment. Project team meetings are held to provide information and solicit direction and guidance throughout the annual Assessment.

### First Tier Evaluation

The project team initially identified GIS data that was appropriate, reliable, and readily available for evaluating surplus potential. This first tier of GIS data, based on current use of existing facilities and environmental constraints, builds the basis of the GIS model (see Table 1). Using a series of spatial

**Table 1 - Criteria for Evaluation (Tier 1 - GIS Model)**

EXISTING FACILITIES & CURRENT USE	
Sewer Facilities	Sewer Discharge Structures, Lift Stations, Clarifiers, Screening Facilities, & Diversion Points
Stormwater Facilities	Stormwater Treatment Facilities
Water Facilities	Water Storage Facility, Pump Station or Treatment Plant
Fire Stations	Bellingham Fire District Stations (1-6, 31, 32)
Public Buildings	City Hall, Public Works Operations, Libraries, etc..
City Parks	"City" or "Neighborhood" Park Type
Trails	in Parks and Greenway/Open Space corridors
ENVIRONMENT	
Lake Whatcom Watershed	Properties within the Lake Whatcom Watershed restricted from surplus potential
Conservation Easement	Properties with Conservation Easements restricted from surplus potential
Wetlands*	150' Buffer
Shoreline Jurisdiction*	200' Buffer
Streams*	75' Buffer
Steep Slopes*	>40% and area >1,000sf
FEMA*	100 yr Floodplain and Floodway

*\*Critical Areas spatially combined and summarized by parcel to create a percent encumbered per parcel.*

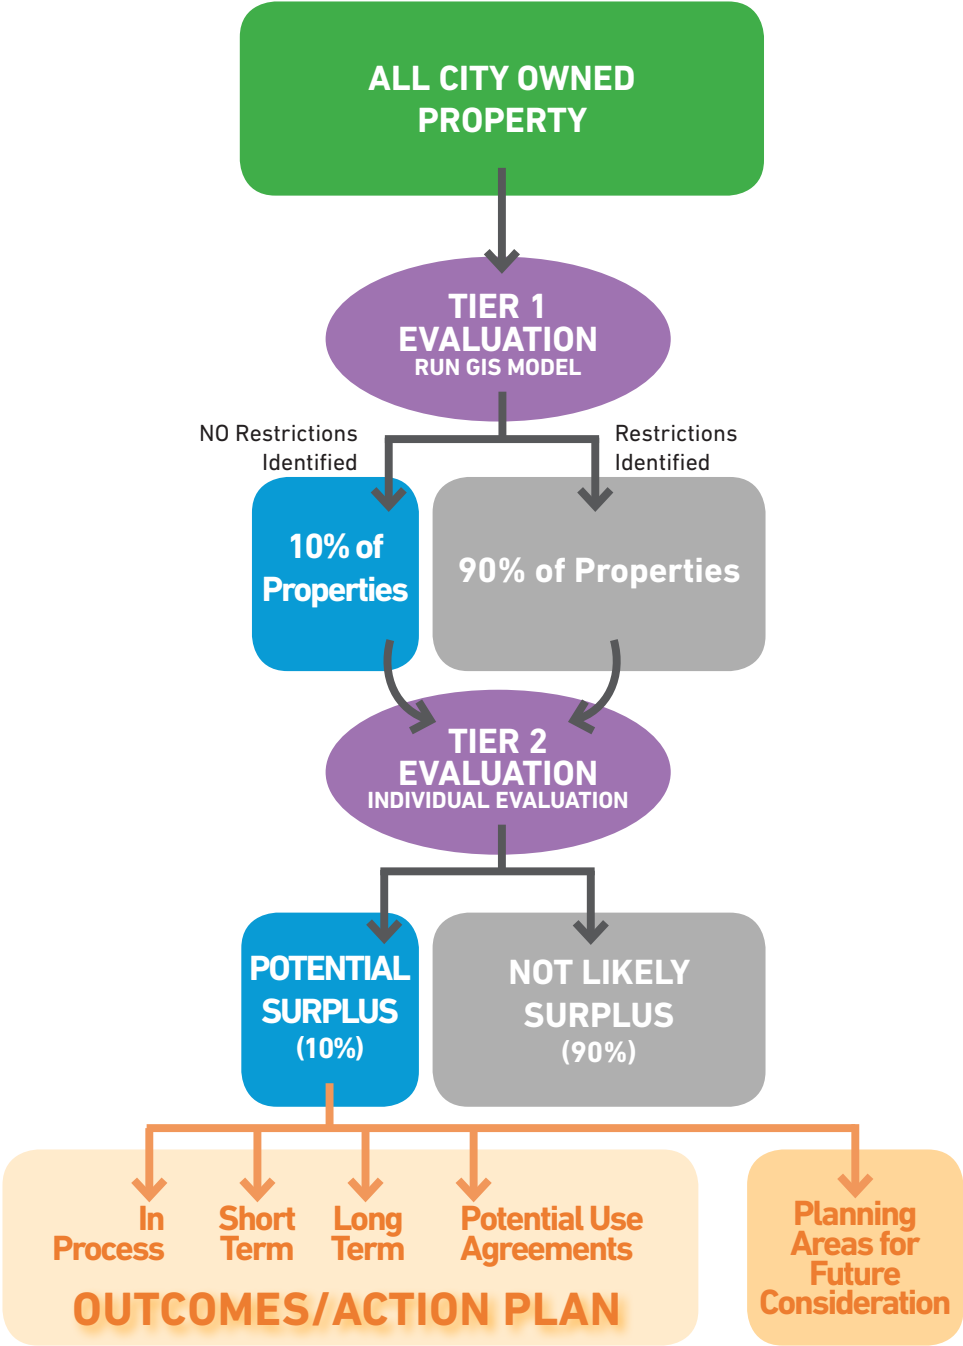

NOTE: Criteria for evaluation should be assessed annually and supplemented with additional data as it becomes available or appropriate. For example, Public Works Natural Resources is compiling spatial data to identify Restoration and Mitigation sites. This data and any other applicable data should be incorporated as it becomes available.

queries, the model evaluates each City property against the criteria and appropriately attributes the City property record in the database. This process is automated through the GIS model and can be run on an annual or as-needed basis to provide an objective baseline evaluation.

**Second Tier Evaluation**

The second tier of evaluation includes the review of use

Figure 1 - Project Process Diagram

agreements, restrictive deeds, potential purchasing fund restrictions, previous Parks Department surplus property evaluations and master planning documents, and is necessarily more subjective. Much of this information is not available in a format that is easily incorporated into the GIS model. Institutional knowledge from project team members plays an important role in this second tier evaluation. Properties in the database were evaluated by the project team on an individual basis to verify the validity of the first tier process (GIS model) and apply adjustments as deemed appropriate.

## FINDINGS

After running the first tier evaluation (GIS model), close to 90% of City properties showed some obstacle to surplus potential based on the established criteria. The model indicates the specific criteria that might impact the surplus potential of each individual property. A simple Yes (1)/No (0) attribute is entered for each criterion, with the exception of critical areas. Critical areas are spatially summarized for an overall percent encumbered for each property. This percentage is entered into the database (See Figure 2).

**Figure 2 - Property Record attributed from GIS Model**

The screenshot shows a software window titled 'Identify' with a search bar set to 'NO Surplus Potential'. Below the search bar, a tree view shows 'NO Surplus Potential' and 'DISTRICT PK'. The 'Location' field displays coordinates: '1,243,327.250 636,547.698 Feet'. A table below lists various fields and their values. The table has two columns: 'Field' and 'Value'. The rows include SITE ID (282), PARCEL\_CODE (380331220139), SEWER (0), STORM (0), WATER (1), TRAILS (1), PUBLICBLDG (1), PARKS (1), FIRE (0), LAKEWHATCOM (0), % Critical Areas (approx.) (44%), CONSERVATION\_EASEMENT (0), ZONING (Public, Open Space/Park/Utilities), NH (WESTERN WASHINGTON UNIVERSITY - Area 2), Acres (65), Square Feet (2,810,143), COMMENT (Sewer, Storm or Water Facility), and SURPLUS\_POTENTIAL (Property does NOT have surplus potential). The bottom of the window shows 'Identified 1 feature'.

Field	Value
SITE ID	282
PARCEL_CODE	380331220139
SEWER	0
STORM	0
WATER	1
TRAILS	1
PUBLICBLDG	1
PARKS	1
FIRE	0
LAKEWHATCOM	0
% Critical Areas (approx.)	44%
CONSERVATION_EASEMENT	0
ZONING	Public, Open Space/Park/Utilities
NH	WESTERN WASHINGTON UNIVERSITY - Area 2
Acres	65
Square Feet	2,810,143
COMMENT	Sewer, Storm or Water Facility
SURPLUS_POTENTIAL	Property does NOT have surplus potential

**TRADING STOCK**

Real property that is not currently feasible or beneficial as surplus, but that could at some future time be considered surplus in exchange for a greater public benefit.

In the second tier evaluation, staff examined properties individually to verify the attributes assigned through the GIS model and to identify unique situations. For example, a handful of properties did not reveal any restrictive attributes; nonetheless the shape, size or location of the property was found to not be suitable as surplus. Other properties were determined by the project team to have a future use or current public benefit although no restrictive attributes were identified by the GIS Model. Further research on individual properties also found deed restrictions that could limit properties from being considered surplus.

Some properties identified with obstacles to surplus potential were reconsidered due to specific situations. One such example is 600 W Holly. The first tier evaluation showed this property as encumbered by shoreline restrictions and trail segments crossing through the property. However, staff determined that the unique nature of 600 W Holly and its place in the Old Town District master plan make it an ideal candidate for redevelopment.

**See Action Plan**

Approximately 5% of City properties were found to have potential as either surplus, trading stock or candidates for possible special use agreements. These properties have been further broken out into the following categories: **In Process, Short Term, Long Term, and Use or Maintenance Agreements.** These categories are explained in the “Action Plan” section below.

Approximately 5% of City properties were found to need further review as part of master planning efforts in specific areas. These properties’ surplus potential was determined to be dependent on future area-wide planning. Rather than evaluating these properties on an individual basis, evaluating them collectively as part of a larger process is a more logical approach. These properties are divided among three geographic areas: Samish Crest/Yew Street Corridor, King Mountain, and Alderwood (See Figure 3 and Appendix B for detailed maps). As master planning progresses in these areas, attention should be paid to City properties with potential for surplus or as trading stock.

A map of Bellingham, Washington, illustrating the city limits and various planning areas. The city limits are outlined in a thick black line. Three specific planning areas are highlighted with purple circles and labeled in purple text: the Alderwood Planning Area in the west, the King Mountain Planning Area in the north-central part, and the Samish Crest/Yew Street Corridor Planning Area in the south. The map includes labels for major roads such as Highway 539, Highway 542, and Highway 11. It also shows the locations of the Airport, Downtown, and Fairhaven. Water bodies like Bellingham Bay, Lake Whatcom, and Lake Padden are depicted in blue. Other labeled areas include UGA, WCC, BTC, WWU, and Geneva. The map is credited to the City of Bellingham Planning Department.

## Surplus Land Assessment 2018 Report & Action Plan

## ACTION PLAN

The Action Plan serves as a recommendation for moving forward with the findings of this Assessment. Any property that has potential for surplus will be held subject to the requirements in Chapter 4.84 of the Bellingham Municipal Code. **See Appendix A for individual property details and summary maps.**

### In Process

There are currently no properties in process for surplus property declaration.

**RECOMMENDED ACTION: None.**

### Short Term (1-4 years):

There are 16 parcels (approximately 7.2 acres, and \$3,331,325 in total assessed value) identified as potential “Short Term” surplus properties. These properties are the most feasible properties for surplus in the short term. All properties are smaller than 2 acres. 4 of 16 Short Term parcels have been identified as most likely to be surplus in the very short term. These four properties are less than 1 acre in size and less dependent on neighboring projects/properties. These properties have been recommended by the team to move forward in the surplus property declaration process.

**RECOMMENDED ACTION: Initiate surplus declaration for the four identified very short term properties. Further explore feasibility of remaining properties for Surplus.**

### Long Term (5+ years):

There are 14 parcels (approximately 38 acres in total) identified as potential “Long Term” surplus properties. Some are properties that have potential for surplus, but are dependent on other factors or actions before surplus designation is feasible. These properties are effectively on “hold”. Other properties are potentially surplus, but due to their size or current use, require further and more intensive planning and investigation into the feasibility of their sale or lease. *Due to the long term nature of these properties and the potential for some to be further subdivided or altered from their current parcel configuration, assessed value is not displayed for “Long Term” properties.*

**RECOMMENDED ACTION: Incorporate these properties into future conversations at higher level review and planning. Annual review of these properties.**

#### Surplus Property Declaration

*See Chapter 4.84.010 of the Bellingham Municipal Code*

- Real Estate Review Committee Formed
- Committee Prepares Property Report
- Public Hearing
- Council Determination

*The Surplus Property Declaration process is facilitated by the Real Estate Review Committee and the City of Bellingham Real Property Manager*

*Proceeds from the sale of any surplus property should be credited to the City of Bellingham General Fund unless specifically restricted by the initial funds used to acquire the subject property.*

process

assessed value

*Annually, Whatcom County assessors physically inspect 1/6th of the county. Properties not inspected in a given year are statistically revalued each year. Every property is inspected at least once every 6 years.*

*Assessed value is one indication of value and does not represent Fair Market Value.*

### **Use or Maintenance Agreements:**

There are 8 parcels (approximately 155 acres in total) identified in this category as properties that due to size, current use, or other restrictions are not likely to be surplus, but do have potential for specific use or maintenance agreements. These properties include opportunities for possible public plazas, community gardens, outdoor art installations, etc.

**RECOMMENDED ACTION: Explore use or maintenance agreements as opportunity and need arises.**

## **CONCLUSION**

As discovered in this Assessment, the majority of City properties are utilized for present or future municipal purposes, and provide a valuable public benefit. The utilization of the GIS model and secondary evaluation process provides a centralized and repeatable framework for evaluating surplus potential on City properties. Often, the City is approached by private or other public entities inquiring about purchasing City property. The database delivers quick access to the results of the evaluation. While a property might not have been designated as potentially surplus through this evaluation, City staff are able to quickly identify the encumbrances that were found in the evaluation and determine the best approach to address specific requests.

This assessment should continue to be repeated on an annual basis. Although an initial investment of time and planning went into developing the model and methodology as observed in this second year of assessment, the process is becoming more streamlined and efficient in successive years.

# **APPENDIX A**

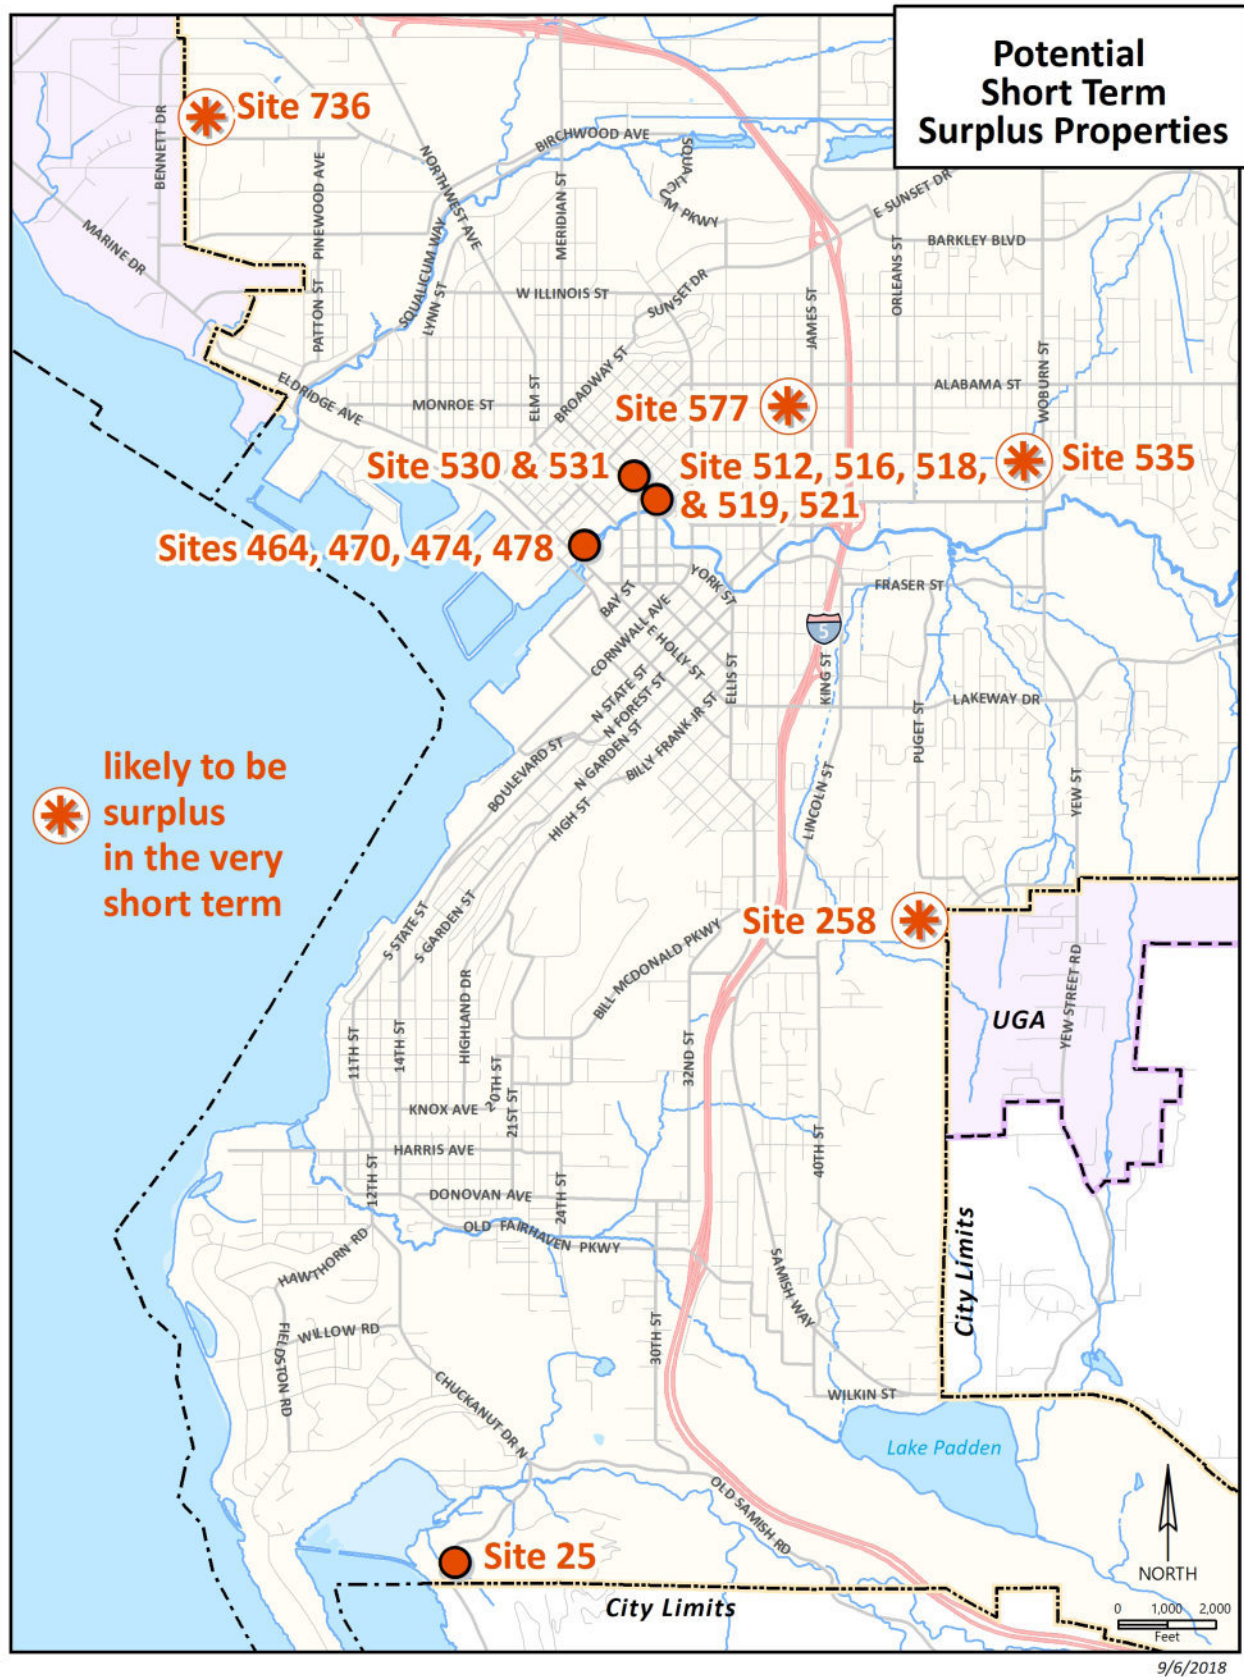

## **Property Details & Summary Maps**

---

- **Short Term**
- **Long Term**
- **Use & Maintenance Agreements**

NOTE: The listing of a property in this appendix only indicates the property has potential for surplus or potential for an alternative use. Further research and consideration is necessary before any property proceeds in the surplus property declaration process. Any property that proceeds in the surplus property declaration process will be held subject to the requirements in Chapter 4.84, "Disposition of Surplus Real Property" of the Bellingham Municipal Code.

# **APPENDIX B**

## **Planning Area Maps**

---

- **Alderwood Planning Area**
- **King Mountain Planning Area**
- **Samish Crest/Yew Street Corridor Planning Area**

NOTE: The maps listed in this appendix aim to show general planning areas and City-owned properties. Rather than evaluating these properties on an individual basis, evaluating them collectively as need and opportunity arises as part of a larger process is a more logical approach. Surplus potential and use is dependent on future area-wide planning.
