**IMPORTANT NOTE:** The properties identified in the Action Plan and Appendix only indicate the property has preliminary potential for surplus or potential for an alternative use. Detailed review, further research and consideration in regards to ownership, deeds, easements, critical areas, etc. is necessary before any property proceeds in the surplus property declaration process. Properties listed are preliminary and are not guaranteed to proceed in the surplus process. Any property that proceeds in the surplus property declaration process will be held subject to the requirements in Chapter 4.84, “Disposition of Surplus Real Property” of the Bellingham Municipal Code.
The City of Bellingham currently owns or manages over 5,000 acres of land within the city limits and surrounding areas of Whatcom County. While most of these properties provide a valuable public benefit, some may be identified as surplus either now or in the future to the City's needs. Chapter 4.84 of the Bellingham Municipal Code allows for the City Council to declare that if it is in the public interest and not needed for some present or future municipal use, real property held by the City may be returned to the tax rolls and sold for a reasonable return.

The purpose of the Surplus Land Assessment is to provide a replicable process for evaluation of City properties to determine which properties are potentially surplus to the City's needs. Establishing a methodology which can be repeated annually saves time, reduces the cost of future assessments, and ensures a consistent and transparent process. A Geographic Information System (GIS) model is utilized to evaluate City properties against established criteria, providing an objective and repeatable, baseline process. Project team members review, verify, and supplement the results of the GIS model to identify unique situations that are not identifiable by the model.

Prior to the inaugural Surplus Land Assessment in 2017, City of Bellingham departments were individually responsible for annual review of properties under their management for potential surplus. This departmentalized method of property review was time-intensive and often repetitive in nature. It was determined to be in the City's interest to develop a replicable process that would have lasting functionality. The development of a comprehensive process for evaluating all City-owned lands would allow for efficient identification of candidate surplus properties.

At the June 20th, 2016 City Council Committee of the Whole meeting, City of Bellingham Planning staff presented the scope and specific criteria for the GIS model to identify surplus potential. City Council was supportive of the evaluation criteria presented as well as the ability of the
model to provide a centralized database and establish an effective process for identifying potential surplus properties.

**METHODOLOGY**

The overall goal of the Surplus Land Assessment is to establish a repeatable process for identifying potential surplus properties and to create an accessible database to store the results of the analysis.

City of Bellingham Planning and Community Development Department staff fulfill the lead role in facilitating the Assessment. Project team meetings are held to provide information and solicit direction and guidance throughout the annual Assessment.

**First Tier Evaluation**

The project team initially identified GIS data that was appropriate, reliable, and readily available for evaluating surplus potential. This first tier of GIS data, based on current use of existing facilities and environmental constraints, builds the basis of the GIS model (see Table 1). Using a series of spatial

*Critical Areas spatially combined and summarized by parcel to create a percent encumbered per parcel.

NOTE: Criteria for evaluation should be assessed annually and supplemented with additional data as it becomes available or appropriate. For example, Public Works Natural Resources is compiling spatial data to identify Restoration and Mitigation sites. This data and any other applicable data should be incorporated as it becomes available.
queries, the model evaluates each City property against the criteria and appropriately attributes the City property record in the database. This process is automated through the GIS model and can be run on an annual or as-needed basis to provide an objective baseline evaluation.

**Second Tier Evaluation**
The second tier of evaluation includes the review of use

![Figure 1 - Project Process Diagram](image-url)
agreements, restrictive deeds, potential purchasing fund restrictions, previous Parks Department surplus property evaluations and master planning documents, and is necessarily more subjective. Much of this information is not available in a format that is easily incorporated into the GIS model. Institutional knowledge from project team members plays an important role in this second tier evaluation. Properties in the database were evaluated by the project team on an individual basis to verify the validity of the first tier process (GIS model) and apply adjustments as deemed appropriate.

**FINDINGS**

After running the first tier evaluation (GIS model), the majority of City properties showed some obstacle to surplus potential based on the established criteria. The model indicates the specific criteria that might impact the surplus potential of each individual property. A simple Yes (1)/No (0) attribute is entered for each criterion, with the exception of critical areas. Critical areas are spatially summarized for an overall percent encumbered for each property. This percentage is entered into the database (See Figure 2).

*Figure 2 - Property Record attributed from GIS Model*
In the second tier evaluation, staff examined properties individually to verify the attributes assigned through the GIS model and to identify unique situations. For example, a handful of properties did not reveal any restrictive attributes; nonetheless the shape, size or location of the property was found to not be suitable as surplus. Other properties were determined by the project team to have a future use or current public benefit although no restrictive attributes were identified by the GIS Model. Further research on individual properties also found deed restrictions that could limit properties from being considered surplus.

Some properties identified with obstacles to surplus potential were reconsidered due to specific situations. One such example is 600 W Holly. The first tier evaluation showed this property as encumbered by shoreline restrictions and trail segments crossing through the property. However, staff determined that the unique nature of 600 W Holly and its place in the Old Town District master plan make it an ideal candidate for redevelopment.

Less than 5% of City properties were found to have potential as either surplus, trading stock or candidates for possible special use agreements. These properties have been further broken out into the following categories: In Process, Short Term, Long Term, and Use or Maintenance Agreements. These categories are explained in the “Action Plan” section below.

Approximately 5% of City properties were identified as part of the Planning Areas for Future Review. These properties’ surplus potential was determined to be dependent on future area-wide planning. Rather than evaluating these properties on an individual basis, evaluating them collectively as part of a larger process is a more logical approach. These properties are divided among three geographic areas: Samish Crest/Yew Street Corridor, King Mountain, and Alderwood (See Figure 3 and Appendix B for detailed maps of these Planning Areas). In the spring of 2019, portions of the Samish Crest/Yew Street Corridor were included in a research project conducted by graduate
students from the University of Washington's Urban Design and Planning program to perform an independent analysis of annexation for the UGAs to the east and south of the City. Additionally, the City is currently studying the Alderwood Planning Area for potential annexation. As master planning progresses in these areas, attention should be paid to City properties with potential for surplus or as trading stock.

![Figure 3 - Planning Areas for Future Review](image)

The remaining City properties were identified as not likely to be surplus. Most of these properties have a specific current or potential future use. While a large number did not meet the specific criteria for consideration as surplus, there are certain situations or remediation that might allow particular
properties to be considered surplus in the future. The GIS model provides valuable flexibility by allowing rapid access to the data, and quick identification of potential obstacles when responding to specific requests.

The Action Plan serves as a recommendation for moving forward with the findings of this Assessment. Any property that has potential for surplus will be held subject to the requirements in Chapter 4.84 of the Bellingham Municipal Code. See Appendix A for individual property details and summary maps.

In Process
There are currently 2 properties moving forward that were declared as surplus property by Council on October 22, 2018. These properties were identified on the Short Term list in the 2018 report. Council is currently considering RFP’s for permanent affordable housing projects on these properties.

RECOMMENDED ACTION: Continue process.

Short Term (1-4 years):
There is 1 parcel (approximately 1.78 acres, and $218,250 in total assessed value) identified as a potential “Short Term” surplus property.

RECOMMENDED ACTION: Further explore feasibility of short term properties for Surplus.

Long Term (5+ years):
There are 25 parcels (approximately 42 acres in total) identified as potential “Long Term” surplus properties. Some are properties that have potential for surplus, but are dependent on other factors or actions before surplus designation is feasible. These properties are effectively on “hold”. Other properties are potentially surplus, but due to their size or current use, require further and more intensive planning and investigation into the feasibility of their sale or lease. Due to the long term nature of these properties and the potential for some to be further subdivided or altered from their current parcel configuration, assessed value is not displayed for “Long Term” properties.

RECOMMENDED ACTION: Incorporate these properties into future conversations at higher level review and planning. Annual review of these properties.
**Use or Maintenance Agreements:**
There are 8 parcels (approximately 155 acres in total) identified in this category as properties that due to size, current use, or other restrictions are not likely to be surplus, but do have potential for specific use or maintenance agreements. These properties include opportunities for possible public plazas, community gardens, outdoor art installations, etc.

**RECOMMENDED ACTION:** Explore use or maintenance agreements as opportunity and need arises.

---

**CONCLUSION**

As discovered in this Assessment, the majority of City properties are utilized for present or future municipal purposes, and provide a valuable public benefit. The utilization of the GIS model and secondary evaluation process provides a centralized and repeatable framework for evaluating surplus potential on City properties. Often, the City is approached by private or other public entities inquiring about purchasing City property. The database delivers quick access to the results of the evaluation. While a property might not have been designated as potentially surplus through this evaluation, City staff are able to quickly identify the encumbrances that were found in the evaluation and determine the best approach to address specific requests.

This assessment should continue to be repeated on an annual basis. Although an initial investment of time and planning went into developing the model and methodology, the process is becoming more streamlined and efficient in successive years.
APPENDIX A
Property Details & Summary Maps

• In Process
• Short Term
• Long Term
• Use & Maintenance Agreements

IMPORTANT NOTE: The listing of a property in this appendix only indicates the property has preliminary potential for surplus or potential for an alternative use. Detailed review, further research and consideration in regards to ownership, deeds, easements, critical areas, etc. is necessary before any property proceeds in the surplus property declaration process. Properties listed on the following pages are preliminary and are not guaranteed to proceed in the surplus process. Any property that proceeds in the surplus property declaration process will be held subject to the requirements in Chapter 4.84, “Disposition of Surplus Real Property” of the Bellingham Municipal Code.

APPENDIX B
Planning Area Maps

• Alderwood Planning Area
• King Mountain Planning Area
• Samish Crest/Yew Street Corridor Planning Area

NOTE: The maps listed in this appendix aim to show general planning areas and City-owned properties. Rather than evaluating these properties on an individual basis, evaluating them collectively as need and opportunity arises as part of a larger process is a more logical approach. Surplus potential and use is dependent on future area-wide planning.
