

Wash your Car Without Hosing the Environment

Home car washing sends pollutants like heavy metals, oil, and soap into our storm drains and directly into our rivers, lakes and streams. The average home owner also uses over 116 gallons of water each time they wash their vehicle. We can keep these pollutants out of our streams and practice better water conservation by using a commercial car wash or waterless car washing products. Many of the environmentally friendly waterless products are only available online, so we created a comparison as an information guide to help you make an informed decision. *-The City of Bothell does not endorse any one product*
